

Is Infant Euthanasia Ethical Opposing Viewpoints Pamphlets Series

The UNESCO Universal Declaration on Bioethics and Human Rights

This book is the first comprehensive report and analysis of the Dutch euthanasia experience over the last three decades. In contrast to most books about euthanasia, which are written by authors from countries where the practice is illegal and therefore practised only secretly, this book analyzes empirical data and real-life clinical behavior. Its essays were written by the leading Dutch scholars and clinicians who shaped euthanasia policy and who have studied, evaluated and helped regulate it. Some of them have themselves practised euthanasia. The book will contribute to the world literature on physician-assisted death by providing a comprehensive examination of how euthanasia has been practised and how it has evolved in one specific national and cultural context. It will greatly advance the understanding of euthanasia among both advocates and opponents of the practice.

Implementation Handbook for the Convention on the Rights of the Child

This collection contains twenty-one thought-provoking essays on the controversies surrounding the moral and legal distinctions between euthanasia and "letting die." Since public awareness of this issue has increased this second edition includes nine entirely new essays which bring the treatment of the subject up-to-date. The urgency of this issue can be gauged in recent developments such as the legalization of physician-assisted suicide in the Netherlands, "how-to" manuals topping the bestseller charts in the United States, and the many headlines devoted to Dr. Jack Kevorkian, who

has assisted dozens of patients to die. The essays address the range of questions involved in this issue pertaining especially to the fields of medical ethics, public policymaking, and social philosophy. The discussions consider the decisions facing medical and public policymakers, how those decisions will affect the elderly and terminally ill, and the medical and legal ramifications for patients in a permanently vegetative state, as well as issues of parent/infant rights. The book is divided into two sections. The first, "Euthanasia and the Termination of Life-Prolonging Treatment" includes an examination of the 1976 Karen Quinlan Supreme Court decision and selections from the 1990 Supreme Court decision in the case of Nancy Cruzan. Featured are articles by law professor George Fletcher and philosophers Michael Tooley, James Rachels, and Bonnie Steinbock, with new articles by Rachels, and Thomas Sullivan. The second section, "Philosophical Considerations," probes more deeply into the theoretical issues raised by the killing/letting die controversy, illustrating exceptionally well the dispute between two rival theories of ethics, consequentialism and deontology. It also includes a corpus of the standard thought on the debate by Jonathan Bennet, Daniel Dinello, Jeffrie Murphy, John Harris, Philipa Foot, Richard Trammell, and N. Ann Davis, and adds articles new to this edition by Bennett, Foot, Warren Quinn, Jeff McMahan, and Judith Lichtenberg.

Assisted Dying for the Terminally Ill Bill (HL)

For thirty years, Peter Singer's *Practical Ethics* has been the classic introduction to applied ethics. For this third edition, the author has revised and updated all the chapters and added a new chapter addressing climate change, one of the most important ethical challenges of our generation. Some of the questions discussed in this book concern our daily lives. Is it ethical to buy luxuries when others do not have enough to eat? Should we buy meat from intensively reared animals? Am I doing something wrong if my carbon footprint is above the global average? Other questions confront us as

concerned citizens: equality and discrimination on the grounds of race or sex; abortion, the use of embryos for research and euthanasia; political violence and terrorism; and the preservation of our planet's environment. This book's lucid style and provocative arguments make it an ideal text for university courses and for anyone willing to think about how she or he ought to live.

Deciding for Others

It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, ... it was the spring of hope, it was the winter of despair. . . . -Charles Dickens, *A Tale of Two Cities* Dickens, of course, did not have the contemporary dilemmas of modern genetics in mind. Indeed, we need to remind ourselves how short the history of modern genetics really is. Recognition that genetic traits are carried by deoxyribonucleic acid (DNA) occurred only about 40 years ago. Knowledge of the three-dimensional structure of DNA is only about 30 years old. The correct number of human chromosomes was not determined until the mid-1950s, and Down syndrome was recognized only in 1959. It was not until in 1968 that the exact location of a gene was determined on an autosomal chromosome, and the study of genes, rather than their protein products, has been possible for barely a decade.

Physician-Assisted Death

This book results from a study by a committee of the Institute of Medicine and the National Research Council's Board on Agriculture. The committee examined the scientific foundations of medically assisted conception and developed an agenda for basic research in reproductive and developmental biology that would contribute to advances in the clinical and agricultural practice of in vitro fertilization and embryo transfer. The volume also discusses some barriers to progress in research and ways of lowering them, and explains the scientific issues important to ethical decision making.

Applied Ethics in Animal Research

This book provides a comprehensive and detailed analysis of the five main parties of the extreme right in the Netherlands (Centrumdemocraten, Centrumpartij), Belgium (Vlaams Blok), and Germany (Die Republikaner, Deutsche Volksunion). Using primary research - including internal party documents - it concludes that rather than right-wing and extremist, the core ideology of these parties is xenophobic nationalist, including also a mix of law and order and welfare chauvinism. The author's research and conclusions have broader implications for the study of the extreme-right phenomenon and party ideology in general.

One of the leading ethical thinkers of the modern age, Peter Singer has repeatedly been embroiled in controversy. Protesters in Germany closed down his lectures, mistakenly thinking he was advocating Nazi views on eugenics. Conservative publisher Steve Forbes withdrew generous donations to Princeton after Singer was appointed professor of bioethics. His belief that infanticide is sometimes morally justified has appalled people from all walks of life. Peter Singer Under Fire gives a platform to his critics on many contentious issues. Leaders of the disability rights group Not Dead Yet attack Singer's views on disability and euthanasia. Economists criticize the effectiveness of his ideas for solving global poverty. Philosophers expose problems in Singer's theory of utilitarianism and ethicists refute his position on abortion. Singer's engaging "Intellectual Autobiography" explains how he came by his controversial views, while detailed replies to each critic reveal further surprising aspects of his unique outlook.

Is Infant Euthanasia Ethical?

By all indicators, the reproductive health of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. Science and Babies is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to

reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should \"shop\" for a fertility service and make consumer-wise decisions; and what we can expect in the futureâ€"featuring interesting accounts of potential scientific advances.

Euthanasia and Assisted Suicide

Is God Still at the Bedside? by Abigail Rian Evans offers an expert interdisciplinary Christian perspective on the complex web of issues surrounding death and dying. Evans here combines first-person stories and interviews with research gathered from the medical, theological, legal, ethical, and pastoral disciplines. Her comprehensive, insightful work will not only benefit families struggling with difficult end-of-life decisions but also inform the doctors, nurses, and pastors who serve them. Book jacket.

Expanding on the National Research Council's Guide for the Care and Use of Laboratory Animals, this book deals specifically with mammals in neuroscience and behavioral research laboratories. It offers flexible guidelines for the care of these animals, and guidance on adapting these guidelines to various situations without hindering the research process. Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research offers a more in-depth treatment of concerns specific to these disciplines than any previous guide on animal care and use. It treats on such important subjects as: The important role that the researcher and veterinarian play in developing animal protocols. Methods for assessing and ensuring an animal's well-being. General animal-care elements as they apply to neuroscience and

behavioral research, and common animal welfare challenges this research can pose. The use of professional judgment and careful interpretation of regulations and guidelines to develop performance standards ensuring animal well-being and high-quality research. Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research treats the development and evaluation of animal-use protocols as a decision-making process, not just a decision. To this end, it presents the most current, in-depth information about the best practices for animal care and use, as they pertain to the intricacies of neuroscience and behavioral research.

The Ethics of Research Involving Animals

This book is the most comprehensive treatment available of one of the most urgent problems in bioethics: decision-making for incompetents.

National bioethics committees in action

This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter

5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

Euthanasia: Searching for the Full Story

In this book, a global panel of experts considers the international implications of legalised euthanasia based on experiences from Belgium.

Casebook on Human Dignity and Human Rights

This volume is a collection of chapters all contributed by individuals who have presented their ideas at conferences and who take moderate stands with the use of animals in research. Specifically the chapters bear of the issues of: notions of the moral standings of animals, history of the methods of argumentation, knowledge of the animal mind, nature and value of regulatory structures, how respect for animals can be converted from theory to action in the laboratory. The chapters have been tempered by open discussion with individuals with different opinions and not audiences of true believers. It is the hope of all, that careful consideration of the positions in these chapters will leave reader with a deepened understanding--not necessarily a hardened position.

In October 2005, UNESCO Member States adopted by acclamation the Universal Declaration on Bioethics and Human Rights. For the first time in the history of bioethics, some 190 countries committed themselves and the international community to respect and apply fundamental ethical principles related to medicine, the life sciences and associated technologies. This publication provides a new impetus to the dissemination of the Declaration, and is part of the

organisation's continuous effort to contribute to the understanding of its principles worldwide. The authors, who were almost all involved in the elaboration of the text of the Declaration, were asked to respond on each article: Why was it included? What does it mean? How can it be applied? Their responses shed light on the historical background of the text and its evolution throughout the drafting process. They also provide a reflection on its relevance to previous declarations and bioethical literature, and its potential interpretation and application in challenging and complex bioethical debates.

Science and Babies

This open access book has been written by ten Belgian health care professionals, nurses, university professors and doctors specializing in palliative care and ethicists who, together, raise questions concerning the practice of euthanasia. They share their experiences and reflections born out of their confrontation with requests for euthanasia and end-of-life support in a country where euthanasia has been decriminalized since 2002 and is now becoming a trivial topic. Far from evoking any militancy, these stories of life and death present the other side of a reality needs to be evaluated more rigorously. Featuring multidisciplinary perspectives, this thought-provoking and original book is intended not only for caregivers but also for anyone who questions the meaning of death and suffering, as well as the impact of a law passed

in 2002. Presenting real-world cases and experiences, it highlights the complexity of situations and the consequences of the euthanasia law. This book appeals to palliative care providers, hematologists, oncologists, psychiatrists, nurses and health professionals as well as researchers, academics, policy-makers, and social scientists working in health care. It is also a unique resource for those in countries where the decriminalization of euthanasia is being considered. Sometimes shocking, it focuses on facts and lived experiences to challenge readers and offer insights into euthanasia in Belgium.

Practical Ethics

Through a collection of writings, various aspects of the subject of euthanasia are explored including the pro-life movement and the legality of living wills.

Digging for peat in the mountain with his Uncle Tally, Fergus finds the body of a child, and it looks like she's been murdered. As Fergus tries to make sense of the mad world around him - his brother on hunger-strike in prison, his growing feelings for Cora, his parents arguing over the Troubles, and him in it up to the neck, blackmailed into acting as

courier to God knows what, a little voice comes to him in his dreams, and the mystery of the bog child unfurls. Bog Child is an astonishing novel exploring the sacrifices made in the name of peace, and the unflinching strength of the human spirit.

Engineering Ethics in Practice

Physician-Assisted Death is the eleventh volume of Biomedical Ethics Reviews. We, the editors, are pleased with the response to the series over the years and, as a result, are happy to continue into a second decade with the same general purpose and zeal. As in the past, contributors to projected volumes have been asked to summarize the nature of the literature, the prevailing attitudes and arguments, and then to advance the discussion in some way by staking out and arguing forcefully for some basic position on the topic targeted for discussion. For the present volume on Physician-Assisted Death, we felt it wise to enlist the services of a guest editor, Dr. Gregg A. Kasting, a practicing physician with extensive clinical knowledge of the various problems and issues encountered in discussing physician assisted death. Dr. Kasting is also our student and just completing a graduate degree in philosophy with a specialty in biomedical ethics here at Georgia State University. Apart from a keen interest in the topic, Dr. Kasting has published good work in the area and has, in our opinion, done an excellent job in taking on the lion's share of editing this well-balanced and probing set of essays. We hope you will agree that this volume significantly advances the level of discussion on physician-assisted euthanasia. Incidentally, we wish to note that the essays in this volume were all finished and committed to press by January 1993.

Withholding Or Withdrawing Life Saving Treatment in Children

Abstract: A comprehensive report by the US President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research addresses some of the most important and troubling ethical and legal questions in modern medicine for consideration by health care professionals, lawyers, and relatives of patients regarding the sensitive topic of voluntary cessation of life-sustaining therapy for the seriously ill. It was concluded that the cases that involve true ethical difficulties are much fewer than commonly believed and that the perception of difficulties primarily occurs because of misunderstandings about the dictates of law and ethics. It also is concluded that, while competent informed patients have the authority to decline or accept health care, others must act on the behalf of incompetent patients. The report urges that health care institutions develop and use internal review methods that permit exploration of all relevant issues. The 7 report chapters are grouped around 2 themes: the various aspects of making treatment decisions; and patient groups raising special concerns (e.g.: permanently-unconscious patients; seriously-ill newborns. (wz).

Death/dying

As the field of bioethics has matured, increasing attention is being paid to how bioethical issues are treated in different moral and religious traditions and in different regions of the world. It is often difficult, however, to obtain timely information about these matters. The Bioethics Yearbook series analyzes how such issues as new reproductive techniques, abortion, maternal-fetal conflicts, care of seriously ill newborns, consent, confidentiality, equitable access, cost-containment, withholding and withdrawing treatment, euthanasia, the definition of death, and organ transplantation are being discussed in different religions and regions. Volume 5 discusses theological developments from 1992 to 1994 in Anglican, Baptist, Catholic, Hindu, Jehovah's Witness, Jewish, Latter-Day Saint, Lutheran, Methodist, Muslim, Pentecostal, and Presbyterian traditions.

Is God Still at the Bedside?

humanism /'hju:meniz(e)m/ n. an outlook or system of thought concerned with human rather than divine or supernatural

matters. Albert Einstein, Isaac Asimov, E.M. Forster, Bertrand Russell, and Gloria Steinem all declared themselves humanists. What is humanism and why does it matter? Is there any doctrine every humanist must hold? If it rejects religion, what does it offer in its place? Have the twentieth century's crimes against humanity spelled the end for humanism? *On Humanism* is a timely and powerfully argued philosophical defence of humanism. It is also an impassioned plea that we turn to ourselves, not religion, if we want to answer Socrates' age-old question: what is the best kind of life to lead? Although humanism has much in common with science, Richard Norman shows that it is far from a denial of the more mysterious, fragile side of being human. He deals with big questions such as the environment, Darwinism and 'creation science', euthanasia and abortion, and then argues that it is ultimately through the human capacity for art, literature and the imagination that humanism is a powerful alternative to religious belief. Drawing on a varied range of examples from Aristotle to Primo Levi and the novels of Virginia Woolf and Graham Swift, *On Humanism* is a lucid and much needed reflection on this much talked about but little understood phenomenon.
