

Level 4 Virus Hunters Of The Cdc Tracking Ebola And The Worlds Deadliest Viruses

List of conspiracy theories

Corporation. Archived from the original on 4 May 2016. Retrieved 27 April 2016. Horowitz, Leonard G. (1996). Emerging Viruses : AIDS and Ebola – Nature, Accident

This is a list of notable conspiracy theories. Many conspiracy theories relate to supposed clandestine government plans and elaborate murder plots. They usually deny consensus opinion and cannot be proven using historical or scientific methods, and are not to be confused with research concerning verified conspiracies, such as Germany's pretense for invading Poland in World War II.

Ebola, also known as Ebola virus disease (EVD) and Ebola hemorrhagic fever (EHF), is a viral hemorrhagic fever in humans and other primates, caused by ebolaviruses. Symptoms typically start anywhere between two days and three weeks after infection. The first symptoms are usually fever, sore throat, muscle pain, and headaches. These are usually followed by vomiting, diarrhoea, rash and

decreased liver and kidney function, at which point some people begin to bleed both internally and externally. It kills between 25% and 90% of those infected – about 50% on average. Death is often due to shock from fluid loss, and typically occurs between 6 and 16 days after the first symptoms appear. Early treatment of symptoms increases the survival rate considerably compared to late start. An Ebola vaccine...

In principle, conspiracy theories might not always be false, and their validity depends on evidence as for any theory. However, they are often implausible *prima facie* due to their convoluted and all-encompassing nature. Conspiracy theories tend to be internally consistent and correlate with each other; they are generally designed to resist falsification either by evidence against them or a lack of evidence for them...
