And What You Wind Up Seeing Here Is if You Can either Know this or the Environment You Want To Know What the Environment Is the Variability Oh Plant Iq Could Come In at 98 a Hundred a Hundred and Two Eight Ten and Twelve the Far More of the Variability in those Six Numbers Is Explained by What Environment It's Going On in Rather than the Genetic Difference That's What Heritability Is Telling You and in the Study like this It Would Tell You that the Heritability Number Is Actually Quite Low because the Amount of Variation due to this Is Far Less Explained by the Gene Type than whether It's the Amazon or the Gobi Desert

And Again Where the Best Evidence for this Has Been Is with Environmental Toxins That Knock Out That Have some of these Mutating Effects and Eggs They Are Not Mutations in a Classical Dna Sense but Nonetheless They Are Now Heritable so that Pops Up Also so What Have We Got Here We Have the Simple Assumption that if You See More Sharing of a Trait with the Mother than with the Father That's Reflecting Prenatal Environment and What We've Seen Here Is Totally Messing this Up Is the Fact that You Do Not Get Equal Genetic Influences from each Parent You Are Getting More Genetic Material You Are Getting More Genes for Your Mother because the Mitochondrial Dna Even if You Are Going To Equal Amounts of Dna Expression
